## Providing perfect fair-faced concrete in 3 steps

To create and maintain a high quality exposed concrete appearance long term, the use of a retouching and glazing system is essential. With MC's Repacryl you will create the best results in only three steps.

MC's retouching and glazing system allows you to treat filled and non filled surfaces in such a way that a homogeneous, clean and high quality yet still natural-looking fair-faced concrete appearance is created. Read here how to achieve the right concrete colour and appearance in three steps.

### Step 1 Mixing colours

Finding the right colour\*

Repacryl hellgrau*	Repacryl betongrau*	Repacryl lichtgrau*	Repacryl achatgrau*

Mix the colours and check if the colour matches your concrete by applying it on a test area.

1	0	0	0
0	0	0	1
3	1	0	0
2	1	0	0
1	1	0	0
1	2	0	0
0	1	0	0
0	2	1	0
0	1	2	0
0	0	1	0
1	0	1	0
3	0	1	0

\*The colours are not 100% binding, as there may be colour deviations in the printing process.

## Step 2 Adding Water

Add 1-3 parts of water to the Repacryl-mixture. Depending how much water you add you will receive different transparency layers.

### Transparency effect with different Repacryl-water-ratios:

## Step 3 Applying Repacryl

### Option A: Apply with sponge

Use MC-Sponge to create a specific „cloudyness“ effect on the concrete.

### Option B: Apply with roller

For large surfaces use a roller to cover the colour differences.

### Option C: Apply with spraying machine

To cover even larger surfaces contact us for spraying Repacryl.
